Art Unit:

Applicant's arguments filed 11/28/01 have been fully considered but they are not persuasive.

Claim Rejection under 35 U.S.C. 103(a) will be maintained for reasons on record and reasons as follows:

Applicant argues that LeClair teaches an emulsion/suspension system requiring water, while the instant invention does not require water, although the solid composition is dispersible in water. Examiner takes the view that the instant claims use the language "comprising" which leaves the instant claims open to the addition of water.

Applicant argues that the examiner is using an impermissible "obvious to try" standard of patentability. Applicant argue that it would have been unobvious to use instant amounts of ingredients. Applicant argues that the limitations of claims 2-6,8-15 are not suggested in the prior art. Claims 2-6,8-15 describe the amounts of ingredients. In a claim to a composition wherein the prior teaches all the limitations of the claim expect instant amounts of ingredients, an applicant must provide data showing unexpected results when employing the instant amounts.

Applicant argues that JP '903 does not teach the composition as a suspension. However, examiner argues that JP '903 teaches the herbicide composition as a flowable solid which is a suspension.

Claims 19,20 are objected to for reason on record.
